

PenTest Lab Exercise Ex000 – Penetration Test Agreement

Goal

As part of your duties for the penetration testing firm pr0b3.com, you are to write a Scope of Work and Rules of Engagement document for a penetration test of their customer, *Art's Tailor Shop*.

Tasks

1. An initial meeting with the owner of Art's Taylor Shop, Art Rosenbaum, takes place in a regular class meeting recorded on Zoom.

If you are able to attend, then make sure you ask as many relevant questions as you can to enable you to prepare these documents.

If you cannot attend, review the recording of that meeting.

If you have further questions, they can be directed to Art in the UF_CISE_PenTest discord.

2. Here are a few documents you may wish to consult in preparing your report:

[The Penetration Test Execution Standard](#)

[TrueSec's Penetration Test Agreement](#)

[PCI DSS Data Security Standard \(PCI DSS\)](#)

[The Open Source Security Testing Methodology Manual Version 3](#)

You may consult these reports, however, you may *not* plagiarize them. That is, do not copy them in their entirety or even copy whole sentences from them.

3. Employ the module units on scoping and rules of engagement, as well as the information provided by Art to determine what elements to include in each of the documents you are preparing. Remember, the scope is strategic (it is about what you will do for the client, that is) and the rules of engagement are tactical (they tell how you will carry out the test in cooperation with the client).
4. Submit a single pdf file via Canvas containing

- (a) The Scope of Work and Rules of Engagement document, followed by
- (b) A brief explanation for why you chose the elements you included in your agreements.
